

Key – Findings

- The value of MAE is 0.24 that leads to accuracy of 50 percentage.
- Although our model perform robustly but still we need more data and further engineering to perform well.

This feature importance visualisation tells us:

- The product categories were not that important
- The unit price and temperature were important in predicting stock
- The hour of day was also important for predicting stock

With these insights, we can now report this back to the business
